

To create Java project, follow the below steps in Eclipse IDE

Start Eclipse IDE in your machine.

Once you start IDE it will open below Dialog box and here you have to define your project workspace ***either in default path or give your own folder location*** for project then click on Launch.

It will open below screen.

To create Java Project, follow the below steps.

1) Click FILE Menu -> NEW -> Java Project (**If Java project is not available in popup, then choose other menu, it will open another dialog box and select Java option to create java project**)

Then, click next

Now here you can give name of the project. **No need to change or set any properties** in this dialog box.

Once you specify the name of the project Next button is enable to do further steps.

New Java Project

Create a Java Project

Enter a project name.

Project name:

☒ Use default location
Location:

JRE

☒ Use an execution environment JRE:

☐ Use a project specific JRE:

☐ Use default JRE 'jre' and workspace compiler preferences [Configure JREs...](#)

Project layout

☐ Use project folder as root for sources and class files

☒ Create separate folders for sources and class files [Configure default...](#)

Working sets

☐ Add project to working sets

Working sets:

Module

☒ Create module-info.java file

Module name:

☒ Generate comments

It will open below dialog box.

Now Click on Finish, it will open dialog box just click on **NO** to create Java project.

To view Project explorer follow the image steps (**Window -> Show View -> Project Explorer**)

Will display below window in Eclipse IDE

1) Righclick the project, **select the build path -> Configure Build Path**

Here Click on **libraries TAB** and click on Modulepath to make it enabled **ADD EXTERNAL JARs...button**

Once you click on **ADD EXTERNAL JARs...button**, it will open another dialog which allows you to add (**mysql-connector-java-8.0.11**) to the project.

Here you have to choose path where you downloaded (**mysql-connector-java-8.0.11**).

Then click **APPLY** button and **APPLY and CLOSE** button.

Once done Please ensure it is available in **REFERENCED LIBRARIES** or not

Next, you need to add below lines of code in **module-info.java** file which is available under SRC folder of the project.

```
module testProject {  
    requires java.sql;  
}
```
